USER RESEARCH PROCESS

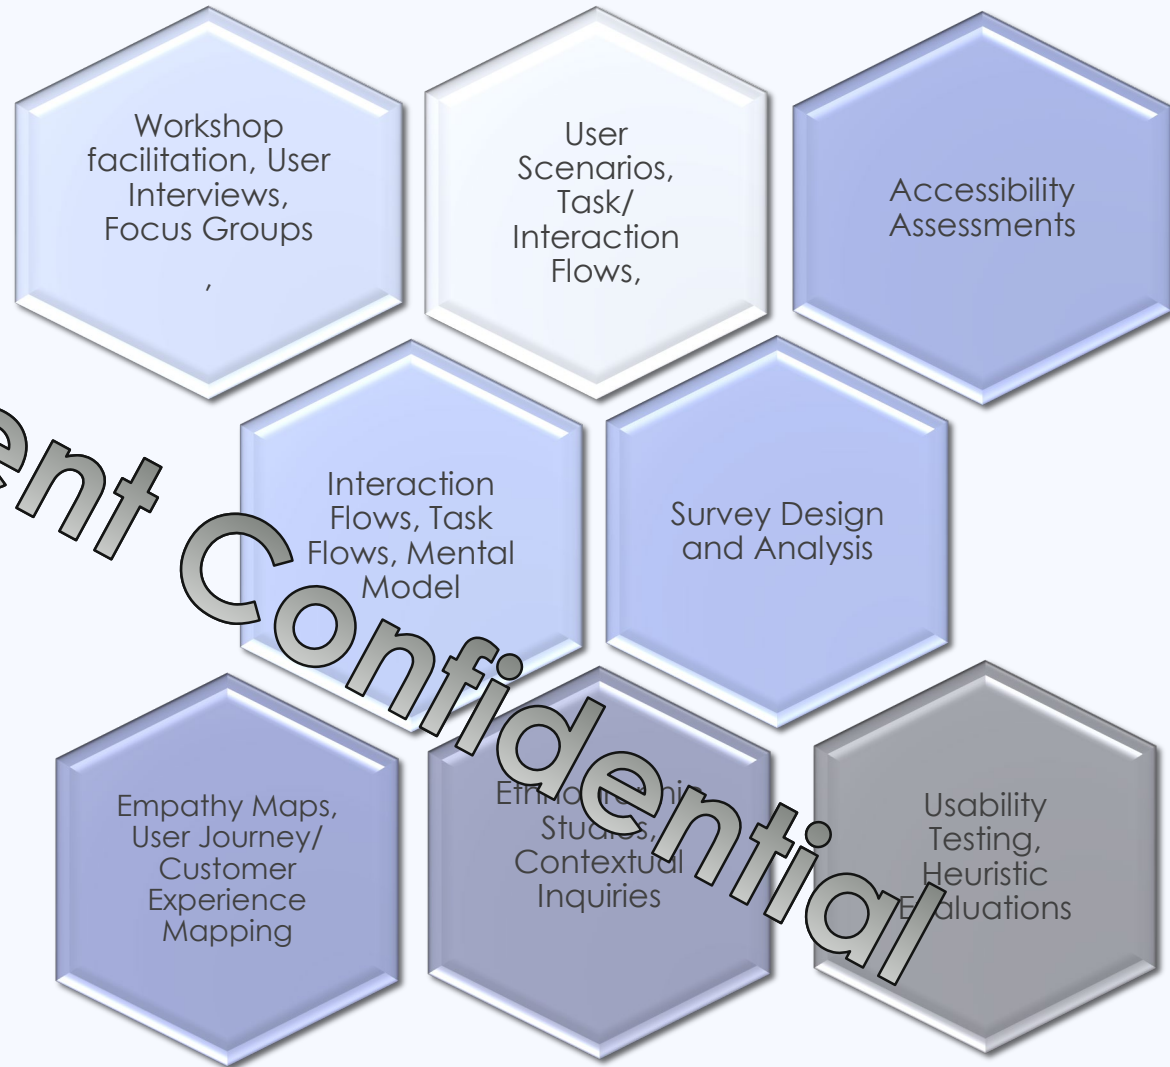

My process is flexible and iterative, following basic user research principles throughout the product development process.

- Discovery/Strategy phase – personas, journey mapping, surveys, interviews, contextual inquiries, ethnographic studies
- Research phase – usability analysis, content audit, ethnographic studies
- Design phase – card sorting, storyboarding, “Wizard of Oz” testing
- Test and Iterate phase – heuristic evaluation, accessibility testing, usability testing

RESEARCH COMPETENCIES

My broad expertise and background enables abilities that support me in communicating key concepts, developing solutions and strategies while balancing user and business needs to complete business objectives within the complex business enterprise space.

Business Process Reengineering Project

Goal: Multi year project to modernize and streamline primary applications with the objective of improving the efficiency, effectiveness and satisfaction of the systems that support the overall process.

Key Processes:

- Discovery
- Research
- Test

Project Objectives

Functionality that emphasized parity along with reduction of critical points of pain for quicker roll out for an internal group with over 10,000 users.

- Integrate applications through a single point of entry
- Improve usability of applications and user satisfaction
- Provide method for patent employees to access web based provided applications
- Improve the current workflow and status of patent applications as they flow through the system
- Support telework and collaboration of users
- Promote a common behavior across all applications

Role:

- Lead - leading team of UX professionals, planning work, and providing primary interface with stakeholders
- User Researcher on key design areas, facilitating user research

Primary Design Responsibilities & Deliverables:

- Leading team of UX professionals to ensure products delivered on time
- Collaborating with stakeholders to identify requirements and solutions
- Working with dev team(s) and business owners in Agile environment
- Write user stories based on analysis and research into user needs
- Conducting user research to gain understanding of user needs
- Designing accessible wireframes that integrated into the enterprise application through iterative process with developers and stakeholders
- Designing and facilitating regular usability tests with end users

Legacy Systems

Older systems had frequent crashes and were not expandable for the 10k users who relied on it every day.

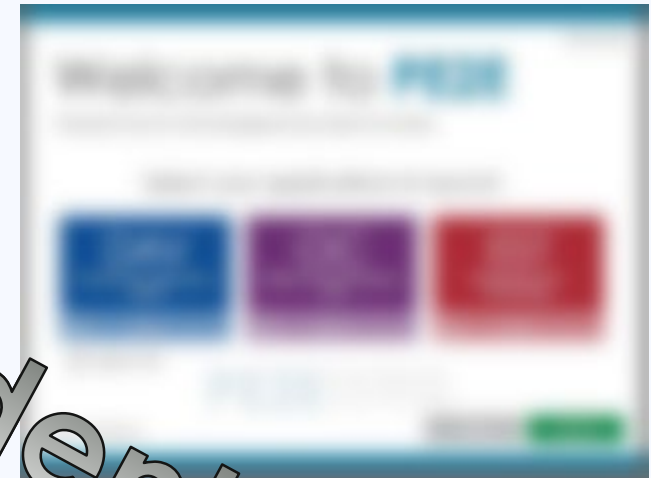

The system is comprised of 3 applications:

Old Client Server based system

Old Word macro based system

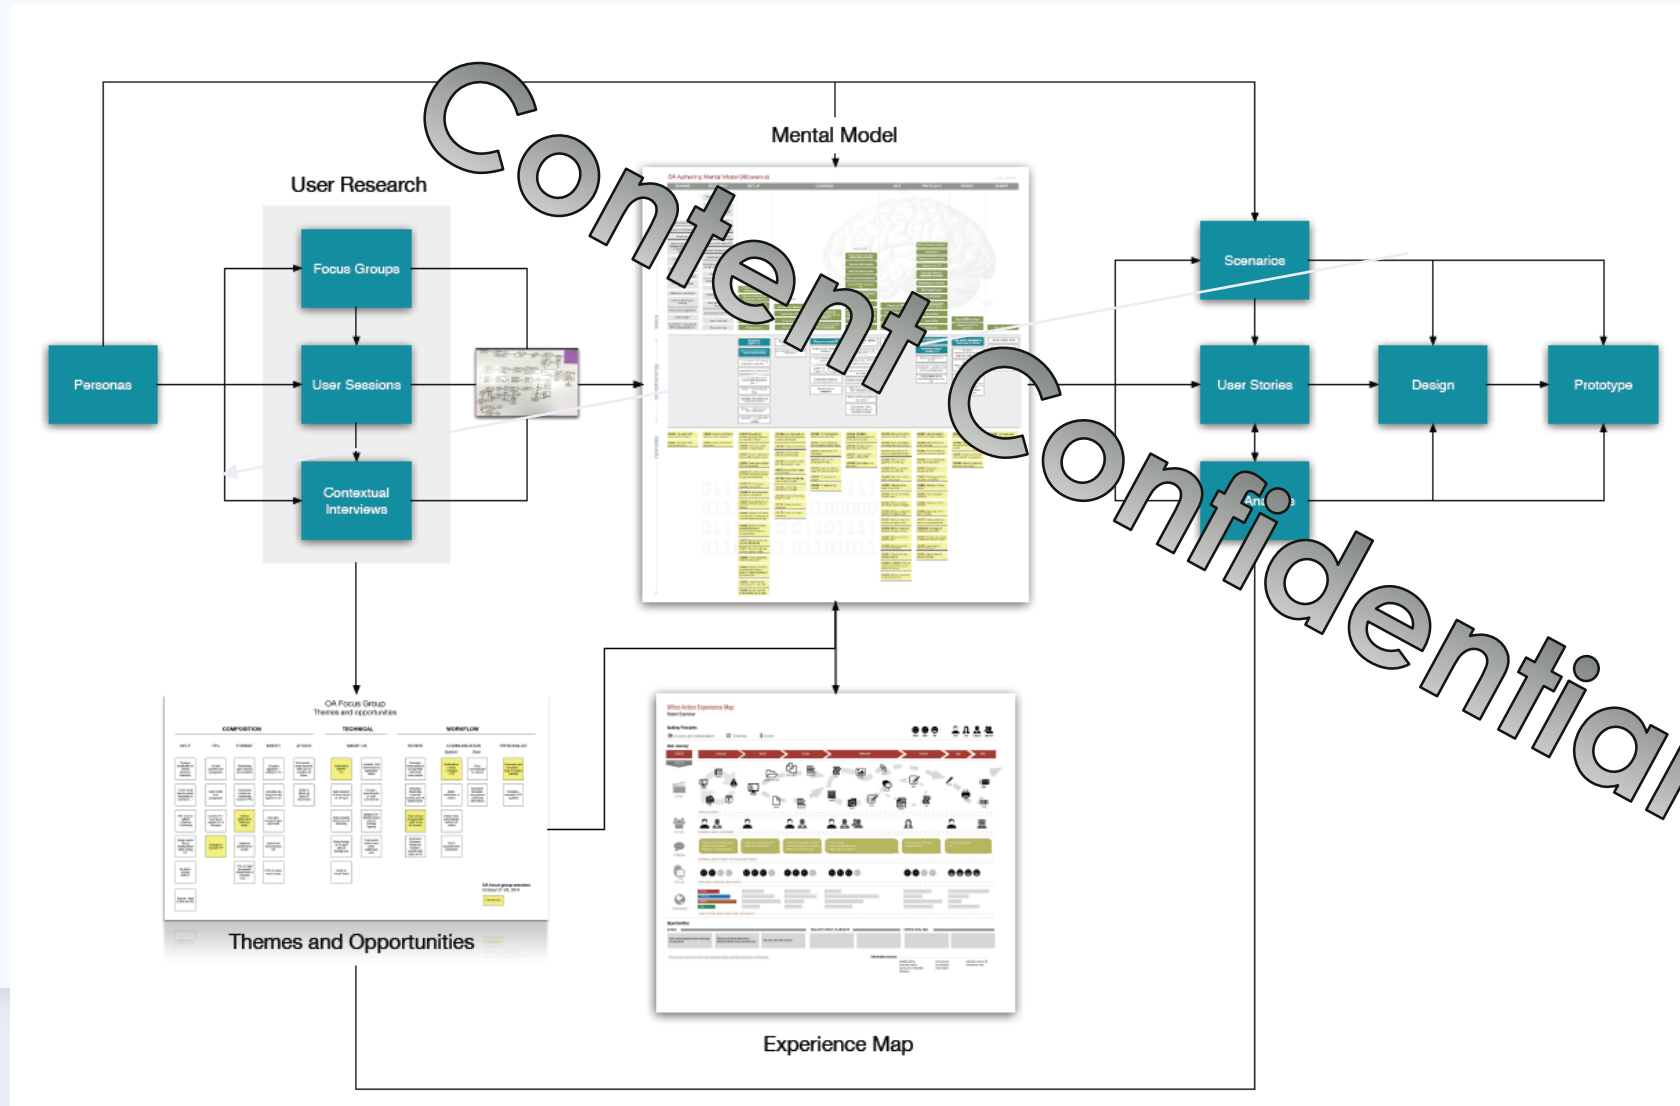

Old web based system

Content Confidential

Discovery Process

Overview of activities and products produced as result of research

Patent Examination System: Discovery Process

Mental model/Journey Map exercise

Mental Model Exercise with users to identify:

- Actions
- Needs
- Issues
- Sentiment

Discovery Process

Mental model

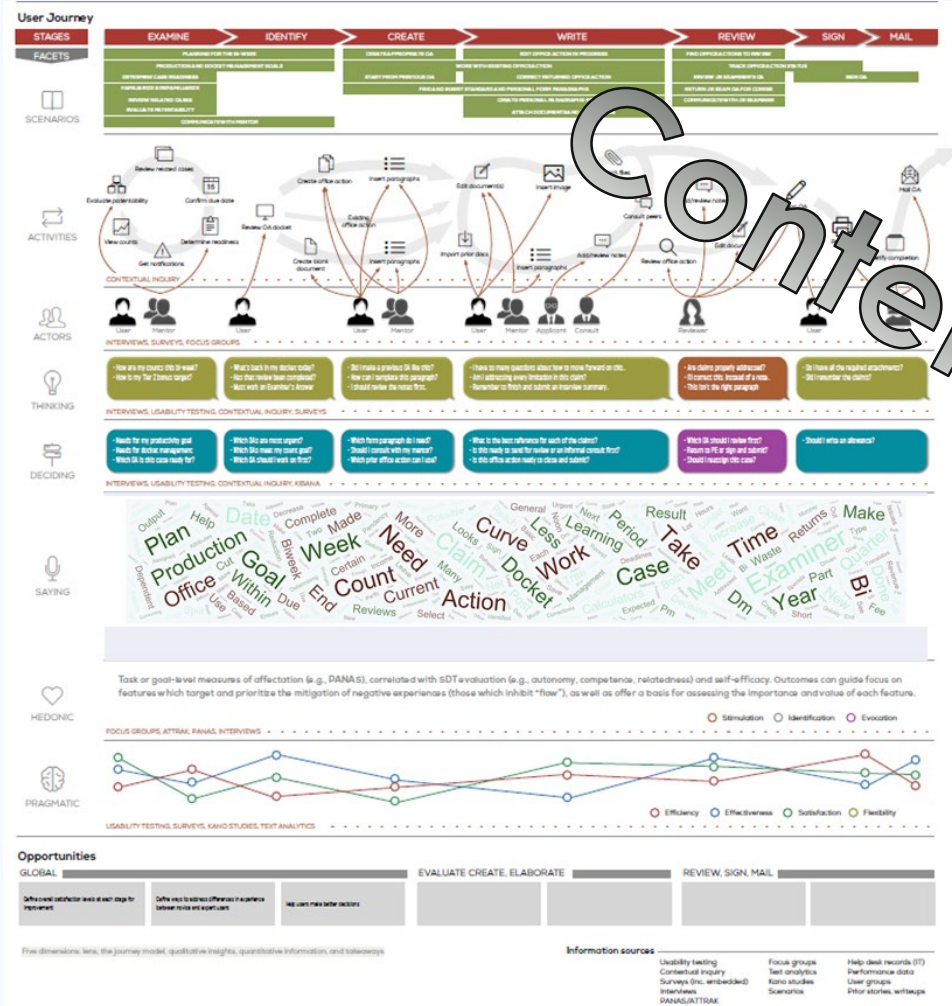

Created and aligned user stories (bottom of diagram)

With the tasks/activities in the mental model (top part of diagram)

Discovery Process

User Journey Map

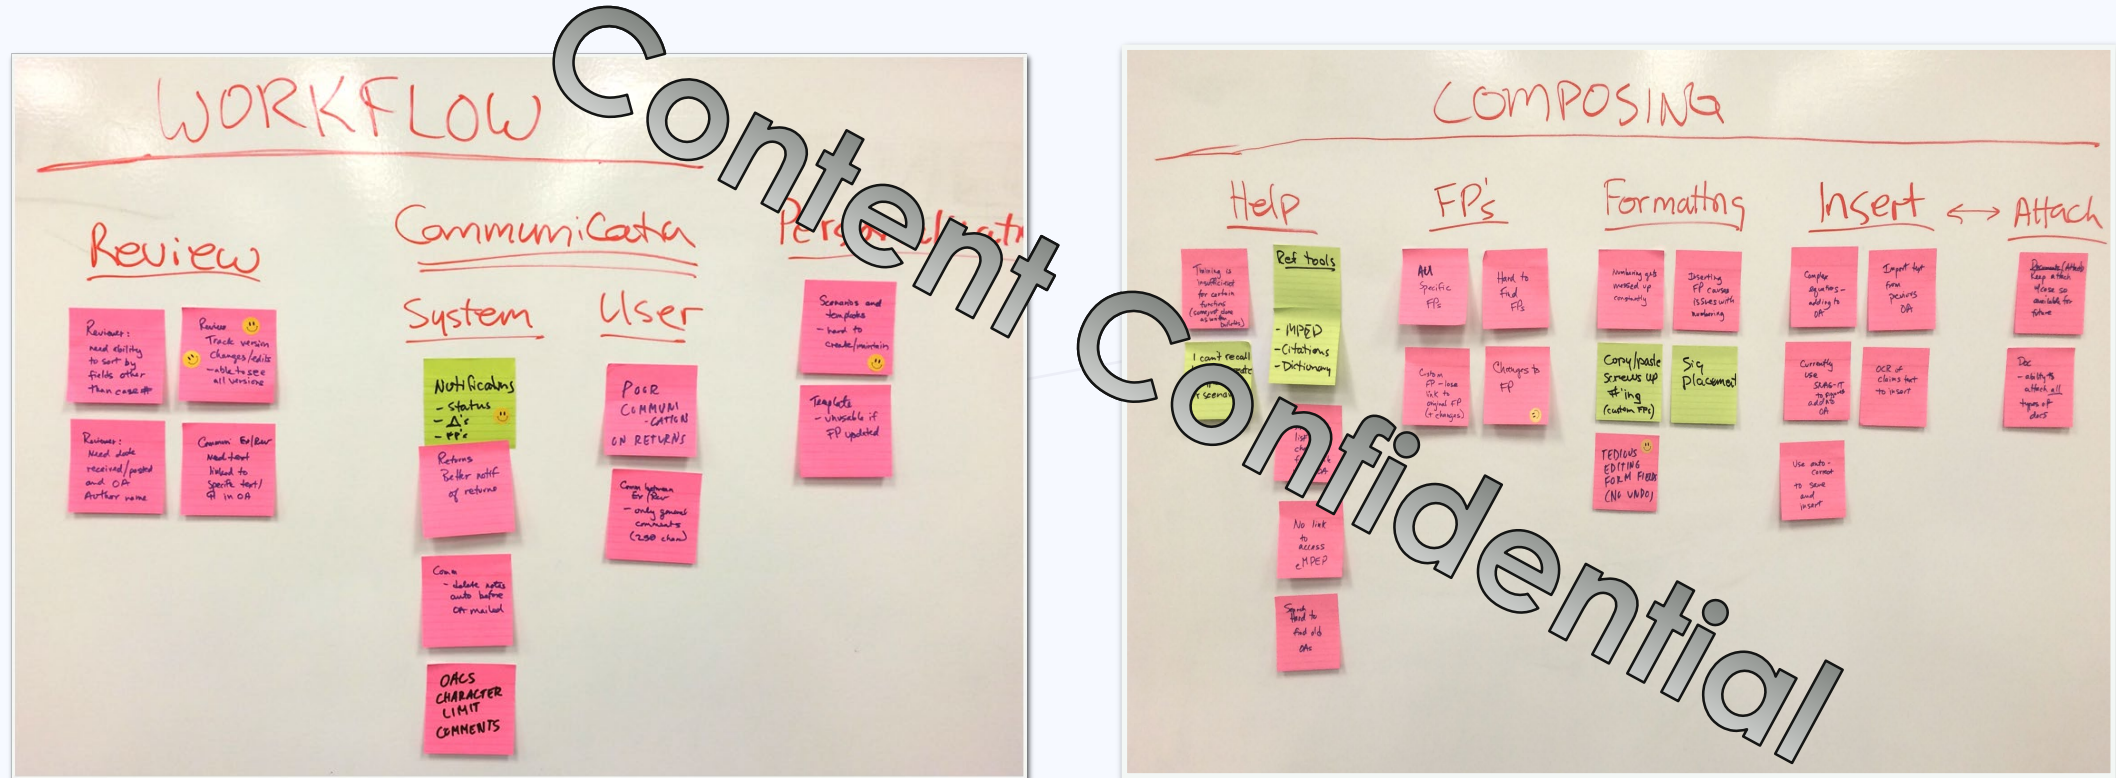

Created map based on analysis of the data collected to provide a holistic view and understand how core functionality fit together

Used data from user interviews and focus sessions.

- Stages/processes
- Actors/people
- Touchpoints
- Emotional aspects (feelings and decision making. Thinking)
- Potential Opportunities

Discovery Process

Identification of Themes and Opportunities – analysis of results to identify commonality

Discovery Process

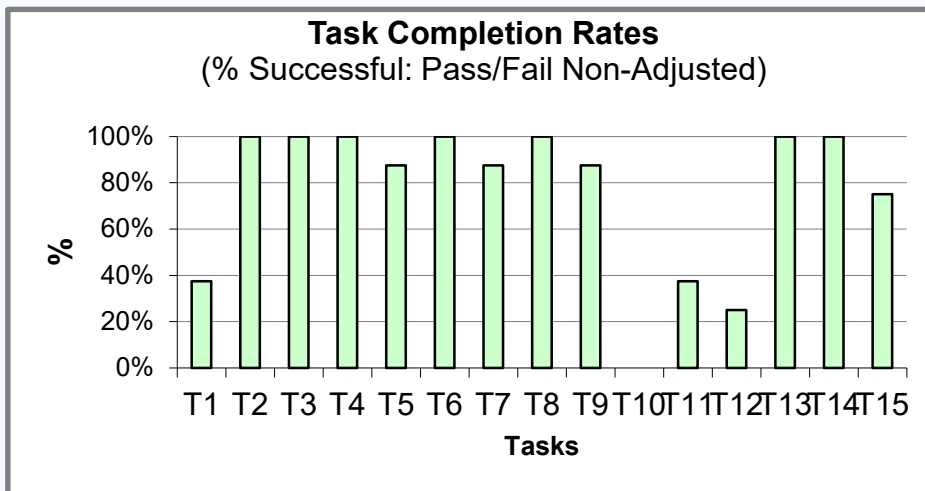

Identification of Themes and Opportunities

Themes and opportunities

COMPOSITION					TECHNICAL		WORKFLOW		
HELP	FPs	FORMAT	INSERT	ATTACH	SMART OA	REVIEW	COMMUNICATION System	User	PERSONALIZE
Timing is insufficient for certain functions (bulletins)	Art unit specific form paragraphs	Numbering gets messed up constantly	Complex equations – adding to OA	Documents – keep attached with case so available for future	Available OA's determined by application status	Reviewer: Need ability to sort by fields other than case number	Notifications • Status • Changes • FPs	Poor communication on returns	Scenarios and templates – hard to create/maintain
"I can't recall how to create templates or scenarios..."	Hard to find form paragraphs	Copy/paste screws up numbering (custom FPs)	Currently use Snag-it to add figures to OA	Ability to attach all types of documents	Auto-inclusion of forms based on OA type	Reviewer: Need date received/ filed and OA for name	Better notification of returns	Examiner/ Reviewer: only general comments (250 chars)	Template – unusable if FP updated
REF TOOLS • MPEP • Citations • Dictionary	Custom FP – lose link to original FP (+ changes)	Tedious editing form fields (no undo)	Use auto-correct to save and insert		Auto-populate forms, e.g. OA Summary	Tracked/linked to specific text/ para. in OA	Delete notes automatically before OA		
Using chapter list as checklist/flow while writing OA	Changes to standard FP	Signature placement is erratic	Import text from previous OA		Allow change of OA type without starting over	Examiner/ Reviewer: Need text linked to specific text/ para. in OA			
No link to access eMPEP		"OAs as legal documents should have a standard look..."	OCR of claims text to insert		Ability to "recall" items				
Search – hard to find old OAs									

FAVORITED

Test Process/Results

- Facilitated usability sessions with users
- Collected and analyzed metrics around the usability studies such as:
 - Task Difficulty
 - Task Completion rates
 - Average Time on Task
 - System Usability Scale (SUS)
- Created recommendations for improvements based on the metrics from the test results
- Presented findings to stakeholders to gain approval/direction
- Incorporated recommendations into new designs as appropriate

Website Redesign: Public Standards Organization

Goal: Project to modernize and streamline the website for a public standards organization to improve the efficiency of clients.

Key Processes:

- Discovery/Strategy
- Research

Project Objectives

Organize information to make it more findable and usable for clients

- Improve usability of website and user satisfaction
- Provide consistency and professional customer experience
- Deliver a personalized experience for clients
- Support collaboration between organization and clients
- Promote unique products and services

Design Role:

- Principal Researcher and Designer on key design areas, facilitating user research

Primary Design Responsibilities & Deliverables:

- Collaborating with stakeholders to identify requirements and solutions
- Working with dev team(s) and business owners in Agile environment
- Write user stories based on analysis and research into user needs
- Conducting user research to gain understanding of user needs
- Creating user information architecture and content strategy for new website
- Creating wireframes for all page types within website for use with new branding

Public Standards Organization: Discovery Phase

Discovery Phase

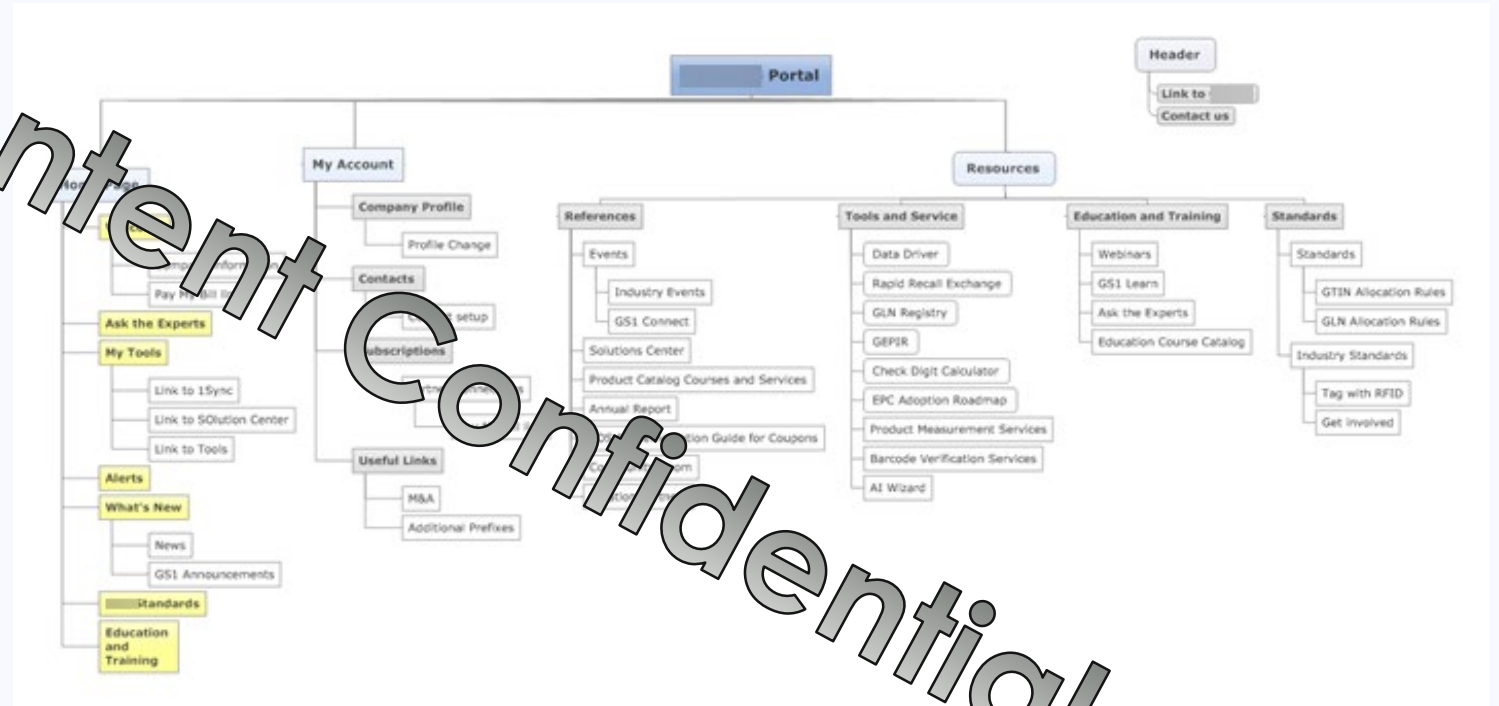

- Worked with marketing
- Held interviews with stakeholders
- Identified SWOTs:
 - Strengths
 - Weaknesses
 - Opportunities
 - Threats
- Created user profiles/personas for key system users

Public Standards Organization: Research Phase

Research Phase

- Facilitated workshops with project team/stakeholders to understand current processes and desired system functionality
- Audited content inventory to identify content groups and uncover metadata available for filtering and grouping
- Conducted workshop with stakeholders to gain insights on each stakeholder's mental model of the content organization which also sparked discussion and further refinement of requirements
- Revised information architecture to reflect content inventory findings and support the refined requirements

Usability Study: Design Validation

Goal: To test design across international clients, identifying design and usability issues and providing recommendations for implementation

Key Design Processes:

- Research
- Design Recommendations

Project Objectives

- Identify major themes for each alternative
- Determine the usability of major functionality
- Provide recommendation on design changes

Primary Research Responsibilities & Deliverables:

- Designing testing plan including identifying task scenarios
- Recruiting, screening and scheduling test facilities and participants
- Analyzing test results
- Making recommendations based on results from data

Design Validation: Test Planning

The Testing Process

The usability testing process is

Participant greeting and briefing

Each participant will be person and relaxed. The participants issue of confidentiality will be statements.

Orientation

The participants will receive a This material will explain the after the tests, and additional that the website is the center of in whatever manner is typical they are being observed and via already completed.

Performance evaluation

The performance evaluation sequentially. The individual observed by the usability speci

It looks like your profile is a match for this activity, and if you would like, I'll go ahead and schedule your for a time

Or

It looks like you might fit the profile for this study, but I will have to check with the product team before I can schedule you for this study.

I have a few questions to ask you to see whether you fit the profile of the individual we need for our study, but thank you so much for your time.

During what day would you like to take your information back to the team, and when would you like to schedule a meeting to discuss your background information to the team, and I will call you soon to let you know whether you are a good fit and to schedule you.

It looks like your profile is a match for this activity, and I would like to schedule you for a time to discuss your background information to the team, and I will call you soon to let you know whether you are a good fit and to schedule you.

Great! Let me give you some information about the background information to the team, and I will call you soon to let you know whether you are a good fit and to schedule you.

- Contact
- Location
- Directions

The study should take around 60 minutes to complete.

First, I will ask you some general questions to get some background information about you.

Then I will give you a series of tasks to complete using the website.

After the tasks are completed, I will ask you a series of general questions about your experience using the website and your informal subjective feedback.

Usability Testing Tasks

If you have any questions, please let me know.

- For the next task, you will be starting on the website and would require you to login. You can add a new tree. When I ask you to begin, press the button on the home page to meet your needs. Please say so and click the button on the home/landing page please say so. There may also be some time considerations.
- Please find the total value out loud. You may begin.
- This next task has two parts. The information on this page is modifiable. You can add or delete the information from this page to meet your needs. For the first part, describe and show me how you expect that this functionality would work.
- For the second part, you will take the 8 options available for viewing on the home/landing page and arrange them as you would want to see them. You may use all or none of these items. After this task, please read the instructions, please read the instructions.
- If you have any questions, please let me know.

We hope that you enjoyed this study. Please describe why you are using or not using each individual item.

Thank you very much for participating in this study.

Please remember when using the website, not you. Any difficulties you may have are a problem with the website and not a reflection on your abilities.

Test Planning

Document to define the testing process, the required resources to complete the plan and the testing schedule

Participant Screening

Scripted screener for identifying qualified participants for the test.

Facilitator Guide

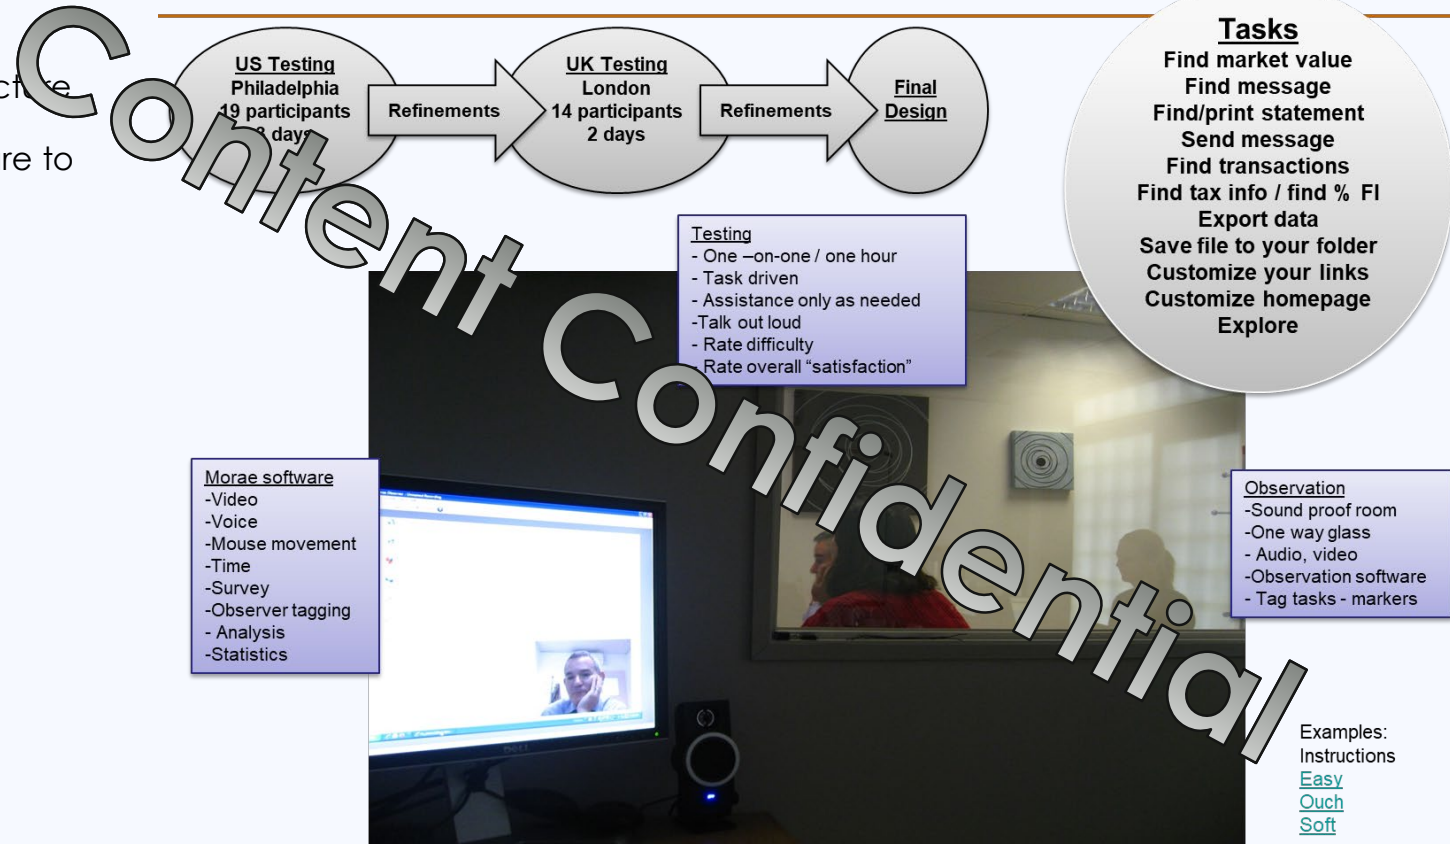

Scripted facilitator guide that includes introduction, task and task descriptions and closing

Design Validation: Testing Process

User Test Process

Study Background/Structure

- In person moderated test structure
- Used TechSmith Morae software to capture session data
- One-on-one sessions with 33 participants from US and UK
- Collected data on:
 - Task Difficulty
 - Errors
 - Time on Task
 - Completion Rate
 - User Satisfaction
 - Usability
 - Learnability

Design Alternative: Research Results for Single Task

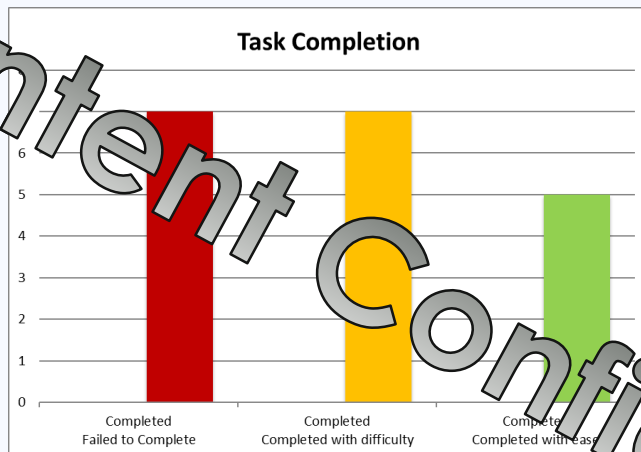

Task 7 –Find tax information (gains/losses)

- Users clicked on Statements and Tax but couldn't find tax info – information was in third level of navigation

Task Difficulty

- Task difficulty was similar for many of the tasks, however, the key tasks of navigation and communication was easier for Design Alternative 1.

Task Completion

- Task Completion was much better for Design Alternative 2. However, some tasks were not completed for either alternative.

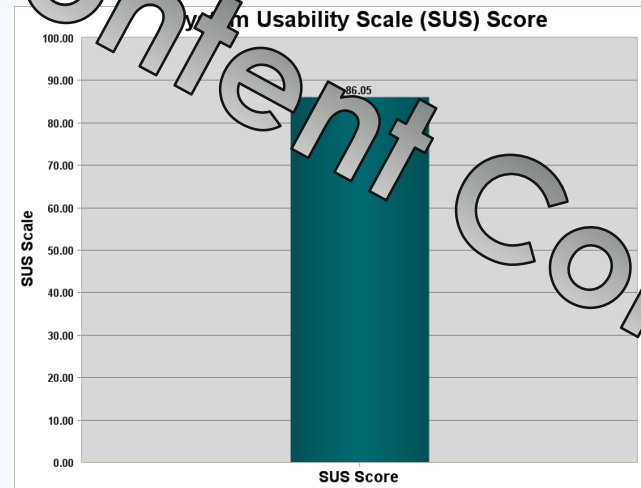

Time on Task

- Task time increased greatly with 5 people never completing task so are not included
- Showing Assisted versus Unassisted

Design Validation: Key Insights, Findings & Recommendations

Key Findings

- Easy was most common theme
- Overall SUS rating of 86% reinforced by the user comments of easy and user friendly

Design Change Recommendation

Key Issue / Underlying Cause	Proposed Design Change
Task 6: Account activity not found Underlying cause – secondary / tertiary navigation is not easily visible	Redesign navigation for visibility Make visual indicator of sub-tab more prominent Make visual indicator of main tab more prominent
Task 8: Tax related information not found Underlying cause: users did not see the tax documents menu	Redesign navigation for visibility Make visual indicator of sub-tab more prominent Make visual indicator of main tab more prominent
Task 9: Copy file to folders not easily found / understood Underlying cause: too many buttons on that page – not well organized – too crowded	Relocate buttons in one location (top right) – possibly switch to text links only – stacked vertically
Task 10: Send Message (to advisor) link not understood Underlying cause: user expected it within communications	Include within messages pages
Task 7: Export data not easily found / understood Underlying cause: not many users do this today	While not relevant to underlying cause – will relocate export button to be closer to table of data Include instructions in HELP section
Task 11: Homepage portlet user priority Underlying cause: user preference	Change default portlets on homepage to match most important information to user

Thank you for taking the time to review!
